

Getting Started

- 1** Insert the Templates CD into your computer's CD drive. Once it's started up, you should see a menu window. Click on the templates that are suitable for your publishing program – either Serif PagePlus or Microsoft Publisher.
- 2** Select Project 1, then you can choose between an upright or a sideways card. A new page will open up from the template, looking something like this:
- 3** First, save your project. Click on “File”, then “Save As”. Click on the little arrow at the top, then choose “My Documents” or whichever folder you want to save it in. Click in the “File name” box and drag to highlight what's there. Then overtype with a suitable name, eg Julie Birthday Card 2007. Then click “Save”.

This screenshot is from PagePlus, but Publisher will look similar but a bit more spacious. That's because all the stuff in those extra panels is tidied away in menus instead of being out on display.
